Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

PUNCTION: Orphan receptor. Probably involved in the function of process of the function and/or nociceptive neurons. May regulate nociceptor function and/or development, including the sensation or modulation of pain. Potently activated by enkephalins (By similarity).

SUBCELIULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Uniquely localized in a subset of small dorsal root and trigeninal sensory neurons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         root and trigeminal sensury neurons.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mas subfamily.
                                                                                                                                                                                          121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nociceptive neurons. May regulate nociceptor function development, including the sensation or modulation of Potently activated by enkephalins (By similarity). SUBCELLULAR LOCATION: Integral membrane protein. TISSUE SPECIFICITY: Uniquely localized in a subset of root and trigeminal sensory neurons.

SIMILARITY: Belongs to family 1 of G-protein coupled r
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Neurosci. 5:201-209(2002).

                                                                                                                        nociceptive neurons. May regulate nociceptor function of nociceptive neurons. May regulate nociceptor function and/or development, including the sensation or modulation of pain. Potently activated by enkephalins including BAM22 (bovine adrenal medulla peptide 22) and BAM (8-22). BAM22 is the most potent compound and evoked a large and dose-dependent release of intracellular calcium in stably transfected cells. G(alpha)q proteins are involved in the calcium-signaling pathway.

-I- SUBCELIULAR LOCATION: Integral membrane protein.
-I- TISSUE SPECIFICITY: Uniquely localized in a subset of small dorsal root and trigeninal sensory neurons.
-I- SIMILARITY: Belongs to family 1 of --

Neurosci. 5:201-209(2002).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "Proenkephalin A gene products activate a neuron-specific GPCRs.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: Orphan receptor. Probably involved in the function of nociceptive neurons. May regulate nociceptor function and/or development, including the sensation or modulation of pain. Potently activated by enkephalins including BAM22 (bovine adrenal medulla peptide 22) and BAM (8-22). BAM22 is the most potent compound and evoked a large and dose-dependent release of intracellular calcium in stably transfected cells. G(alpha)q proteins are involved in the calcium-signaling pathway. SUBCELULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Uniquely localized in a subset of small dorsal root and trigeminal sensory neurons.

SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mas subfamily.

   "" "Proenkephalin A gene products activate a new family of reuron-specific GPCRs." "Nat. Neurosci. 5:201-209(2002).

"I "PUNCTION: Orphan receptor. Probably involved in the financiceptive neurons. May regulate nociceptor function development, including the sensation or modulation of Potently activated by enkephalins (By similarity).

"I SUBCELLULAR LOCATION: Integral membrane protein.
"TISSUE SPECIFICITY: Uniquely localized in a subset of root and trigeminal sensory neurons.

"Has subfamily"

Probably involved in the function of nociceptive neurons. May regulate nociceptor function and/or development, including the sensation or modulation of pain. Potently activated by enkephalins (By similarity). SUBCELLULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Uniquely localized in a subset of small dorsal root and trigeminal sensory neurons.

SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               s SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                InterPro;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       coupled.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Has a limited expression profile, be peripheral and within the central nervous system, with levels in dorsal root ganglion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: Orphan receptor. Probably involved in the function nociceptive neurons. May regulate nociceptor function and/or development, including the sensation or modulation of pain. Cortistatin-14 seems to be a high potency ligand at this rece Cortistatin has several biological functions including roles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sleep regulation locomotor activity, and corrical function. In receptor-expressing cells, cortistatin-stimulated increases in intracellular \text{Ca}(2+) but had no effect on basal or forskolinstimulated cAMP levels, suggesting that this receptor is G(q)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mas subfamily.

Nat. Neurosci. 5:201-209 (2002).

PUNCTION: Orphan receptor. Probably involved in the function of nociceptive neurons. May regulate nociceptor function and/or development, including the sensation or modulation of pain.

Potently activated by enkephalins (By similarity).

Potently activated by enkephalins (By similarity).

SUBCELIULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Uniquely localized in a subset of small dor root and trigeminal sensory neurons. Associated preferentially with 184 class of small-diameter somatosensory afferents (also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC The present invention relates to a new G-protein coupled receptor (GPCR) CC peptide. The invention is useful for identifying a modulator of GPCR and CC for treating a disease or condition mediated by a human protease. The CC invention is also useful as models for the development of human cC development of human therapeutic groteins, as targets for CC development of human therapeutic agents, and as query sequence to perform CC assarch against sequence databases to, for e.g., identify other family CC members of related sequences. The vector of the invention is useful for CC producing a GPCR protein or its fragment, for identifying GPCR protein or its fragment, for identifying GPCR protein cor its fragment, for identifying GPCR protein CC animals. The present amino acid sequence represents the human G-protein CC coupled receptor (GPCR) protein of the invention. This sequence is CC encoded by the human G-protein coupled receptor (GPCR) protein coupled receptor (GPCR) gene located on CC chromosome 3
                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a human-derived G protein-coupled protein designated hHI77213, which is isolated from the human hippocampus. The G protein-coupled receptor can be used for preventing, treating and diagnosing genetic diseases associated with G protein-coupled protein, and for regulating cellular functions. The protein can be used to prevent and treat disorders associated with G protein-coupled protein gene dysfunction. It can also be used to identify G protein-coupled protein ligands and generating antibodies and antisers against the protein. It is also useful in constructing recombinant receptor protein expression systems, developing receptor-binding assay systems and screening drug candidates, and can be used as a probe in the genetic diagnosis of G protein-coupled protein diagnosis of G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; G protein-coupled receptor; hippocampus; diagnosis; genetic disease; cellular function regulation.

                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the protein and coding sequences of several human G-protein coupled receptors (GPCRs). These can be used in the identification of candidate compounds as receptor agonists or inversagonists having applicability as therapeutic agents. The present sequent is a GPCR protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel endogenous and non-endogenous versions of G protein-coupled receptor useful for identification of candidate compounds as receptors or antagonists for use as therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; G-protein hRUP32; hRUP33; h

                                                                                                              The invention relates to Mrg (mas-related gene) protein, which is a G-protein coupled receptor and drg-12 protein, which is a receptor. The invention is useful for identifying compounds that bind to it, especially agonists or antagonists. Administration of an agent (e.g. the identified agonist) that increases the expression of Mrg in a mammal may be used for treating impaired sensory perception in a mammal, especially pain. The antagonist may also be useful for treating impaired sensory perception in a mammal. The present sequence is human MrgX3 protein
                                                                                                                                                                                                                                           Isolated polypeptide, Mrg, which is a G-protein coupled receptor a isolated polypeptide, drg-12, which is also a receptor, useful for identifying agonists or antagonists for treating pain.

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing pharmacogenomics. õ

Disclosure; SEQ ID NO 529; 1498pp; English

This invention relates to a novel nucleic acids, and encoded polypeptides CC thereof, which have properties related to the stimulation of biochemical CC or physiological responses in a cell, tissue, organ or organism. CC Specifically, it refers to the use of biologically active fragments for CC diagnostic and prognostic assays and furthermore in the treatment of CC diverse pathological conditions. The present invention describes novel human and murine NOVX proteins, as well as methods to modulate their CC expression using antisense oligos, ribozymes and peptide nucleic acids. CC The NOVX polypeptides, polymucleotides and antibodies are useful in CC treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, cc atherosclerosis, cancer and diabetes. Furthermore, they may be used in CC treating or preventing diseases such as inflammation, autoimmune CC disorders, allergies, blood disorders, acquired immunodeficiency syndrome CC (AIDS), obesity, asthma, immunoglobulin (Ig)A nephropathy, cirrhosis, CC arthritis, Alzheimer's disease, infections, stroke, muscular dystrophy CC and epilepsy. Accordingly, these molecules have many activities including CC cytostatic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic, neuroprotective, nootropic, antibacterial, virucide, antiparasitic, CC relaxant and anticonvulsant. In addition, they are useful in screening CC assays to identify small molecules that modulate or inhibit, for example, cof the propertion. This polypeptide is a homologue of a human NOVX protein of the invention. pharmacogenomics. of the invention.
